

TORONTO CENTRAL WATERFRONT

2006, Toronto, Canada

In June 2006, West 8 in joint venture with DTAH received the prestigious recognition in winning the Toronto Central Waterfront Innovative Design competition. Connectivity between the vitality of the city and the lake and a continuous, publicly accessible waterfront are the focal points of the plan. The first phase of realization is now underway and includes the design and reconstruction of Queen's Quay Boulevard and the design of public space wave decks and timber bridges at seven heads of slips.
